

Graphics Examples

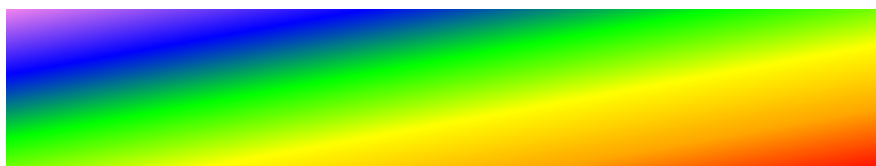

XSL-FO provides the means to display images and vectorial graphics through two elements:

- ***fo:instream-foreign-object*** when you have the content embedded in the XSL-FO document
- ***fo:external-graphic*** when the image resides in an external file.

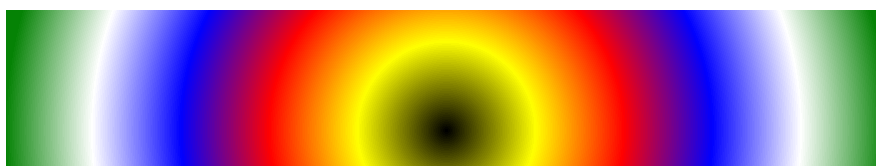

SVG

One of the supported formats for ***fo:instream-foreign-object*** is SVG (Scalable Vector Graphics):

Gradients

Multi-color linear gradient.

Multi-color radial gradient.

Path
